The Delaware River Basin Commission (DRBC) is responsible for the management and conservation of the Delaware River Basin, which includes the Nanticoke River. The DRBC works to ensure the sustainability of the basin's natural resources and promotes public awareness of the importance of protecting these resources for future generations.
The Nanticoke River was by 1700 a productive area of wildlife and there were many more native peoples. The area was rich and it was not until the 18th century that Native Americans had a large impact on the river. The Native Americans used the river for hunting and fishing and there were many species of fish and other aquatic animals that were important to their way of life. The Nanticoke River was also used by Native Americans for trade and commerce. The river was a major trade route for the Native Americans and it was used to transport goods and people.

The Nanticoke River was also a major source of the Atlantic Sturgeon fishery. The Atlantic Sturgeon were prized for their meat and their eggs, which were used as a source of fertilizer. The fish were caught by Native Americans using nets and other methods. The eggs were dried and stored for use later in the year. The fish were also used for other purposes, such as making tools and other objects.

The Nanticoke River was also important to the early settlers in Maryland. The river provided a source of fresh water and it was also used for transportation. The settlers used the river to transport goods and people and it was also used to transport wood and other materials. The river was also used for fishing, and it was an important source of subsistence for the early settlers.
